Quick Guide Installing Zend Studio Language Packs

By Zend Technologies, Inc.

Installing Zend Studio Language Packs

If your system's regional settings are configured to German, French or Italian, you can install a language pack which will display the Zend Studio for Eclipse user interface in the required language.

To install the language pack:

1. Go to the [Studio Downloads](http://www.zend.com/en/products/studio/downloads) site (<http://www.zend.com/en/products/studio/downloads>) and download the relevant Studio Language Pack (DE, FR or IT).
2. Extract the Language Pack into the Zend Studio for Eclipse installation directory. E.g:
Windows: C:\Program Files\Zend\Zend Studio for Eclipse - 6.0.1
Linux: /usr/local/Zend/ZendStudioforEclipse_6.0.1
Mac: /Applications/Zend/Zend Studio for Eclipse - 6.0.1

Note:

This will extract the language pack files into the existing 'plugins' and 'features' folders in your installation directory.

If you want to keep the language pack files separate from the Zend Studio for Eclipse installation files, carry out the following steps:

- i. Instead of extracting the language pack into the installation directory, extract it into a folder named 'eclipse'. E.g:
Windows: c:\translations\eclipse
Linux: /usr/local/Zend/translations/eclipse
Mac: /Applications/Zend/translations/eclipse
- ii. Create a folder named 'links' in your Studio installation directory. E.g:
Windows: c:\Zend\Zend Studio for Eclipse - 6.0.1\links
Linux: /usr/local/Zend/ZendStudioforEclipse_6.0.1/links
Mac: /Applications/Zend/Zend Studio for Eclipse - 6.0.1/links
- iii. In the new 'links' folder, create a text file named 'translations.link', containing a line specifying the path to your 'eclipse' folder. e.g:
Windows: path=c:/translations
Linux: path=/usr/local/Zend/translations
Mac: path=/Applications/Zend/translations

This will cause Zend Studio for Eclipse to look for the language pack files in the 'eclipse' folder.

3. Open the ZendStudio.ini file, located in

Windows / Linux: <Studio Installation Directory>/ZendStudio.ini

Mac: <Studio Installation Directory>/ZendStudio.app/Contents/MacOS/ZendStudio.ini

4. Before '-startup', add the following lines:

```
-nl
<language>
Replace <language> with 'de' for German, 'it' for Italian, 'fr' for French and 'en' for English. E.g:
--launcher.XXMaxPermSize
256m
-nl
de
-startup
plugins\org.zend.php.startup_1.0.0.jar
-vmargs
-Xms128M
-Xmx512M
```

5. Launch Zend Studio for Eclipse.

The new language settings will be recognized and Zend Studio for Eclipse will load with the appropriate language pack.
