

Zend Administration as a Service

Take the Stress Out of PHP Application Monitoring.

Zend Administration as a Service tackles your toughest PHP application administration challenges. We provide a team of dedicated consultants to guide you through installing, monitoring, maintaining, and updating PHP runtimes, freeing you to handle higher-order concerns.

Uninterrupted Performance Monitoring

Zend installs monitoring tooling in your infrastructure to provide continuous performance and health insight for your application, from the underlying system to the web server and PHP.

This allows us to quickly identify issues, provide personalized performance recommendations, and deliver prompt alerts of application disruption or failure.

Weekly Reporting

Weekly reports are delivered to your inbox, containing insights, recommendations, and alerts.

Data Graphs and Visualizations

Reports include graphs and other visualizations to illustrate your application's performance trends.

Scheduled Security Updates

We implement all PHP security patches for Zend-managed products on your schedule, keeping your application secure and compliant while minimizing disruptions.

Installation Guidance from Dedicated Experts

From beginning to end, you partner with a team of support specialists who provide consistent service and ongoing expertise. Our dedicated consultants will work with you to ensure that ZendPHP and your web server are installed according to maintainable standards, configured to work with your extensions, and tuned to meet your performance requirements.

Simplified Scalability & Observability

PHP applications are complex, and scaling these apps to meet demands can be a complicated process. Zend makes it easy.

Our dedicated specialists will guide you through installing and configuring ZendHQ to match your standards, allowing your application to automate recurring jobs, offload long-running processes to workers, monitor performance, deploy at scale, and stay secure.

Simplify Your PHP App Monitoring Today
