# Migrating From Zend Server to the Enterprise Web Platform

Deploy Anywhere. Scale Effortlessly. Stay Compliant.

## Future-Proof Mission-Critical PHP Without Disrupting Workflows

The Zend Enterprise Web Platform is a custom-configured command center for enterprise PHP applications. Incorporating many of the features you enjoy from Zend Server, it is the ideal solution for teams looking to modernize mission-critical applications.

Here's what's included.

### The Features You Love

The Enterprise Web Platform is built on many of the features you rely on in Zend Server, such as easy-to-read dashboards, queueing, and monitoring.

However, the platform takes these features further through integrated telemetry and custom metric visualizations, expanded orchestration, and hands-on support from our Professional Services team.

### New Tools to Enjoy

The Enterprise Web Platform offers a shift from manual scripts to a declarative deployment model. You benefit from automated, policy-driven scaling and resilience, plus enhanced observability that moves beyond event-triggered traces to scheduled profiling.

### All the Benefits of PaaS Without the Constraints

Simplify PHP management with a container-ready and security-first architecture, including CIS-hardened images and built-in orchestration to handle PHP workloads — without the lock-in or hidden costs associated with traditional PaaS options.

## Expert Support at All Stages of Production

Get direct support and services from the PHP engineers who built the platform.

### Tailored Implementation

Unlock expert assistance for building your PHP app containers and dropping them into the platform.

### Integrated PHP LTS

Zend PHP Long Term Support is built directly into the platform, providing stability and security to your applications without extra configuration.

### Ongoing, On-Demand PHP Expertise

Zend takes on the heavy lifting as you explore and deploy your platform, Get help with:

- Identifying critical metrics and creating visualizations
- Isolating root causes, including app bugs and performance bottlenecks
- Implementing code tracing
- Addressing any other issues that occur in your deployment

## Schedule Your Demo of the Zend Enterprise Web Platform

See how the Zend Enterprise Web Platform can secure, scale, and monitor your critical PHP applications. Contact your account representative or visit our website to learn more.

# Zend Server vs. Enterprise Web Platform: Feature Comparison

The Zend Enterprise Web Platform is built on features that you love from Zend Server, but expanded to adapt to a rapidly changing PHP ecosystem. Use this table to explore what's the same, what's changed, and what's been added to improve your mission-critical PHP.

| Feature Area | Zend Server | Zend Enterprise Web Platform |
|---|---|---|
| Dashboards and Monitoring | ✓ Built-in dashboards and app monitoring | ✓ Enhanced dashboards and real-time observability via ZendHQ |
| Job Queue Management | ✓ Supported | ✓ Improved queue visibility and orchestration |
| Deployment Model | Traditional server-based deployments | ✓ Declarative deployment |
| Scaling | Manual or scripted | ✓ Built-in, session-safe autoscaling |
| Resilience | Basic failover | ✓ Resilience policies for high availability |
| Container Support | Limited | ✓ Container-ready* via Docker or Kubernetes** |
| Compliance | Manual hardening | ✓ CIS-hardened images for audit readiness |
| PHP Support | ZendPHP LTS available | ✓ Integrated LTS runtimes |
| Observability | Event-based traces | ✓ Scheduled/sampled traces for proactive profiling*** |
| Future-Proofing | Requires manual upgrades | ✓ Supports modern frameworks and container orchestration |
| Implementation Help | Centralized documentation | ✓ Turnkey implementation by Zend experts |
| Support Model | Standard Zend support | ✓ 24/7/365 production support for the platform and integrations |

*Optional | **Kubernetes support coming in 2026 | ***Available for PHP 8.0 and later

## See How the Enterprise Web Platform Improves Your Infrastructure

Keep the features you love from Zend Server while future-proofing critical PHP applications. Contact your account representative or visit our website to get started.
